

Prime Guru – The Journey of Saran Chandra

When I, **Saran Chandra**, first thought about Prime Guru, it wasn't about building a business empire. It was about solving a problem I saw every day. In villages, towns, and even cities across India, people struggled with technology. Smartphones, laptops, and computers were everywhere, but confidence in using them was missing.

I remember watching farmers confused about downloading government scheme apps, elders panicking over suspicious bank messages, and even educated friends unsure whether a link was safe or a scam. That's when I realized: **India doesn't just need access to technology—it needs guidance.** And that realization gave birth to Prime Guru.

How Prime Guru Started

I launched Prime Guru with a simple vision: *make technology easy and safe for everyone.*

The app allows anyone to ask for help—whether it's installing or uninstalling an app, checking if a message is genuine, or learning basic digital skills. I made sure Prime Guru was completely free for the people, because I knew they wouldn't trust or use it if it came with a price tag. The government stepped in to support us, funding the company based on the number of people we helped and the time we spent guiding them.

This way, Prime Guru became a bridge between people and technology, without financial barriers.

Challenges I Faced

Starting Prime Guru wasn't easy for me, **Saran Chandra**.

- At first, people thought Prime Guru itself might be a scam. Building trust was the hardest part.
- Poor internet connectivity in rural areas forced us to design the app to work even on low bandwidth.
- Many educated people underestimated the need for help, but when faced with fraud messages, they realized the importance of guidance.
- Scaling support was tough—handling thousands of queries daily while keeping the personal touch required constant innovation.

My Success Story

Today, Prime Guru has grown into a movement. Farmers use it to verify subsidy messages. Parents use it to install educational apps for their children. Senior citizens rely on it to avoid online fraud. Students use it to learn how to use laptops for their studies.

The most rewarding part of my journey is hearing stories of lives changed. One farmer told me, *“Because of Prime Guru, I didn’t lose my savings to a scam.”* That moment reminded me why I started this mission.

Prime Guru is now a symbol of **trust, safety, and empowerment**. For me, success isn’t about profits—it’s about the confidence we’ve given to people who once felt left behind by technology.

✦ I am **Saran Chandra**, and Prime Guru is not just my company—it is my contribution to building a safer, smarter India.
